Conditions Database Workshop
quick intro & workshop goals

Dirk Düllmann

Conditions DB Project

- Sub-Project of Persistency Framework Project
  - .. which also hosts POOL
- Conditions DB is a separate project
  - SC2 votum has put additional tasks into the PF scope
  - Only staffed with Andrea Valassi (80%) as sub-project leader
  - Need to understand available resources
- Emphasis on keeping POOL and the ConditionsDB as independent as possible
  - ConditionsDB should not require POOL or vice versa
- May need some review of existing functionality on both sides to minimise overlap between POOL and ConditionsDB

Workshop Goals

- ## Summarise/document the current state
  - Functionality, use and experience with existing packages
    - Status of Oracle and MySQL packages
  - Experiment requirements
    - First round completed of discussions after project start
  - Review more recent extensions
    - Online use, complex data storage, etc..

- ## Produce a draft work plan for the project
  - Will try to summarise requests and present a first draft by tomorrow

- ## Understand the staffing of the project
  - Probably only after the workshop
