JRA2 Summary

issue 1:
Enough effort must be allocated to QA in the activities. Can this be considered part of the 20% estimated overhead? A verification process should to be established --> main processes should have checklists to go through to allow monitoring them

issue 2:
Interaction with JRA1 is wider than what's presented. Job statistics from RBs are only a subset of the information, non everybody is going to use the LB tool. Need proper interpretation to be used as an estimate of the success rate, although it is true that smaller VOs may not have the expertise to set up dedicated accounting systems and will use what's provided. The data needs to be calibrated against existing accounting information from SA1
