Support of multiple VOs

- Producers:
 - Publish to as many VOs as you want
 - 1) A user has a default VO
 - Perhaps – but it is more to configure
 - Optionally specify an array of VOs for each constructor
 - 2) A user has no default VO
 - All constructors have an array of VOs
 - Or a special VO set object – why?
- Authorisation for the operation is needed
- Should all registry instances support all VOs?
 - Perhaps
 - If not may to contact multiple physical registries
 - But then does it scale?

Consumers

- Should we be able to consume from more than one VO?
 - Yes
- Could specify the set of VOs to consider in the Consumer constructor
