

- **As for March 05 prototype, MJRA4.4 will provide**
 - Binary distributions (zip and gzip files).
 - An installation guide (ASCII text file).
 - An installer for automated deployment of BAR and NSAP services to Tomcat/Axis
- **May also provide a set of system tests for each component (e.g., BAR client, BAR service and NSAP service) that can be run via the installer**

- End Site 1 and End Site 2 require installation of BAR Client, BAR service and the base installation (which includes the JRA3 security library).
- End Site 2 require installation of BAR service (for mainly to test BAR2BAR communication and security).
- BAR configuration file should be updated for each site if the default values are unsatisfactory.

- NREN1, NREN2 and GEANT just require installation of NSAP service, at each site, and the base installation.
- System tests for NSAP ?
