

ICFA HEP Grid and Digital Divide Workshop

22-27 May 2005

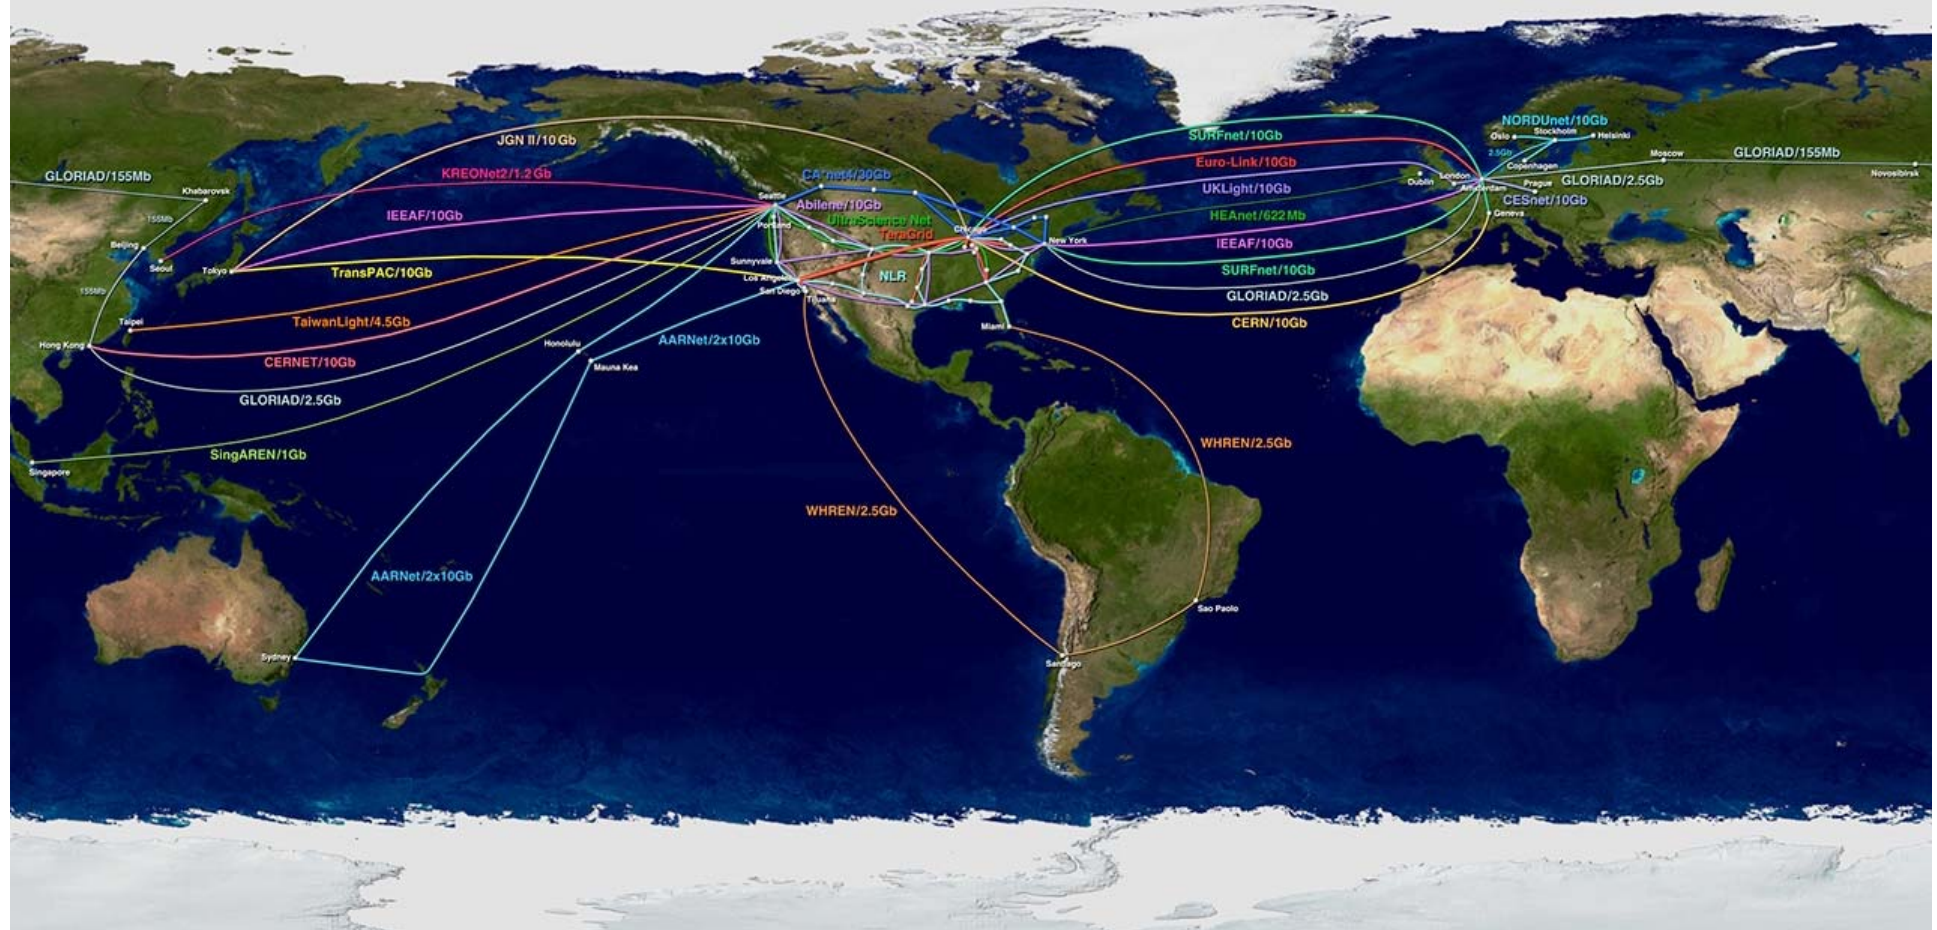

Daegu, Korea

George McLaughlin
Director, International Developments
AARNet

Kees Neggers
Managing Director
SURFnet

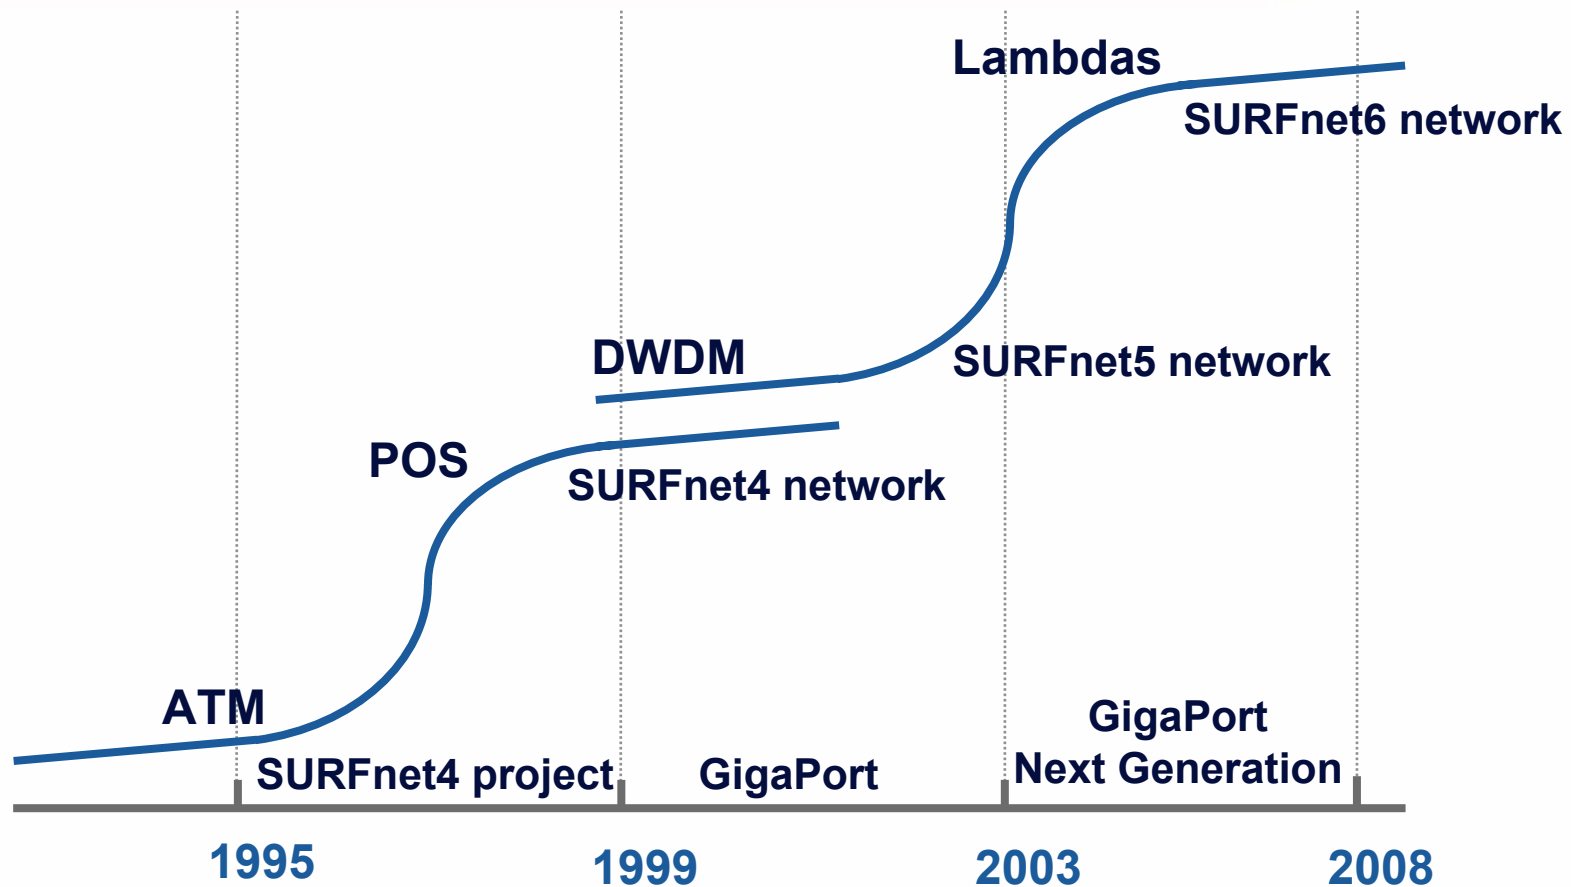

Linking the World with Light – the GLIF Challenge

→ GLIF vision

- Linking the World with Light
- It is no longer sufficient to connect researchers to the internet, they have to be connected to each other.
- GLIF community shares a common vision of building a new grid-computing paradigm, in which the central architectural element is optical networks, not computers, to support this decade's most demanding e-science applications.

→ Paradigm shift

Next generation is not a simple extrapolation of current networks

Utilisation trends

→ VLBI at JIVE in Dwingeloo, NL

→ Lambdas as part of research instruments

- Many data collection points collecting ~ 20 Tbit/s
- Processing in Groningen
- Large data sets distributed to many destinations in The Netherlands and abroad

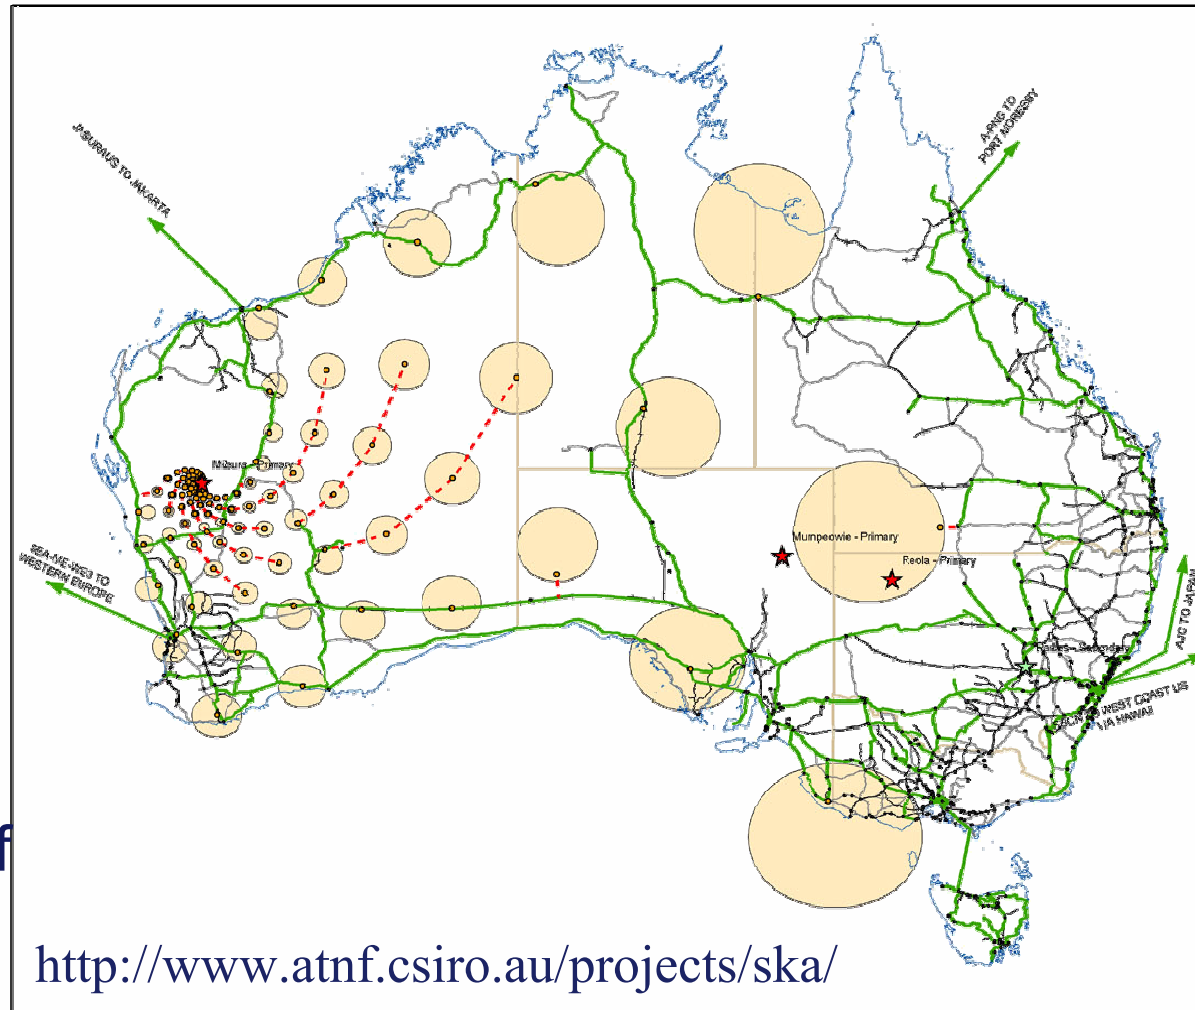

www.lofar.org

→ The Square Kilometre Array

- \$2Bn investment in infrastructure
- Real-time data analysis at Petabits per second
- Storage >40 years

Building the world's largest computational & data facility in one of the world's most isolated locations

→ A word on networking costs

- Costs of optical port is 10% of switching port is 10% of router port with same characteristics
 - 10G routerblade -> 100+ k\$, 10G switch port >10k\$, MEMS port -> 1 k\$
- Give each packet in the network the service it needs, but no more

→ Paradigm shift

Hybrid networking

IP + lambdas

- Packet switched internet for regular many-to-many usage
- Light Paths for new high speed few-to-few usage

→ Light Path Provisioning

Lambdas:

- enable layer 1 and 2 end-to-end Light Paths

Light paths:

- provide excellent quality on point-to-point connections at very high speed (1-10G)
- not constrained by traditional framing, routing, and transport protocols
- are becoming integral part of scientific instruments
- enable creation of Optical Private Networks (OPN)

→ Spring 2001 Start of lambda networking

- 2.5Gbit/s lambda ordered by SURFnet between StarLight, Chicago, USA and NetherLight, Amsterdam, NL
- Lambda terminated on Cisco ONS15454 muxes,
 - WAN side: SONET framed: OC48c
 - LAN side: GbE interfaces to computer clusters

→ History of Lambda Workshops

- Brainstorming in Antalya, TR at TERENA Networking Conference in 2001
- Lambda workshops so far were by invitation only but always attached to an open event related to lambda networking:
- September 2001: first Lambda Workshop in Amsterdam followed by open Lambda Workshop organized by TERENA

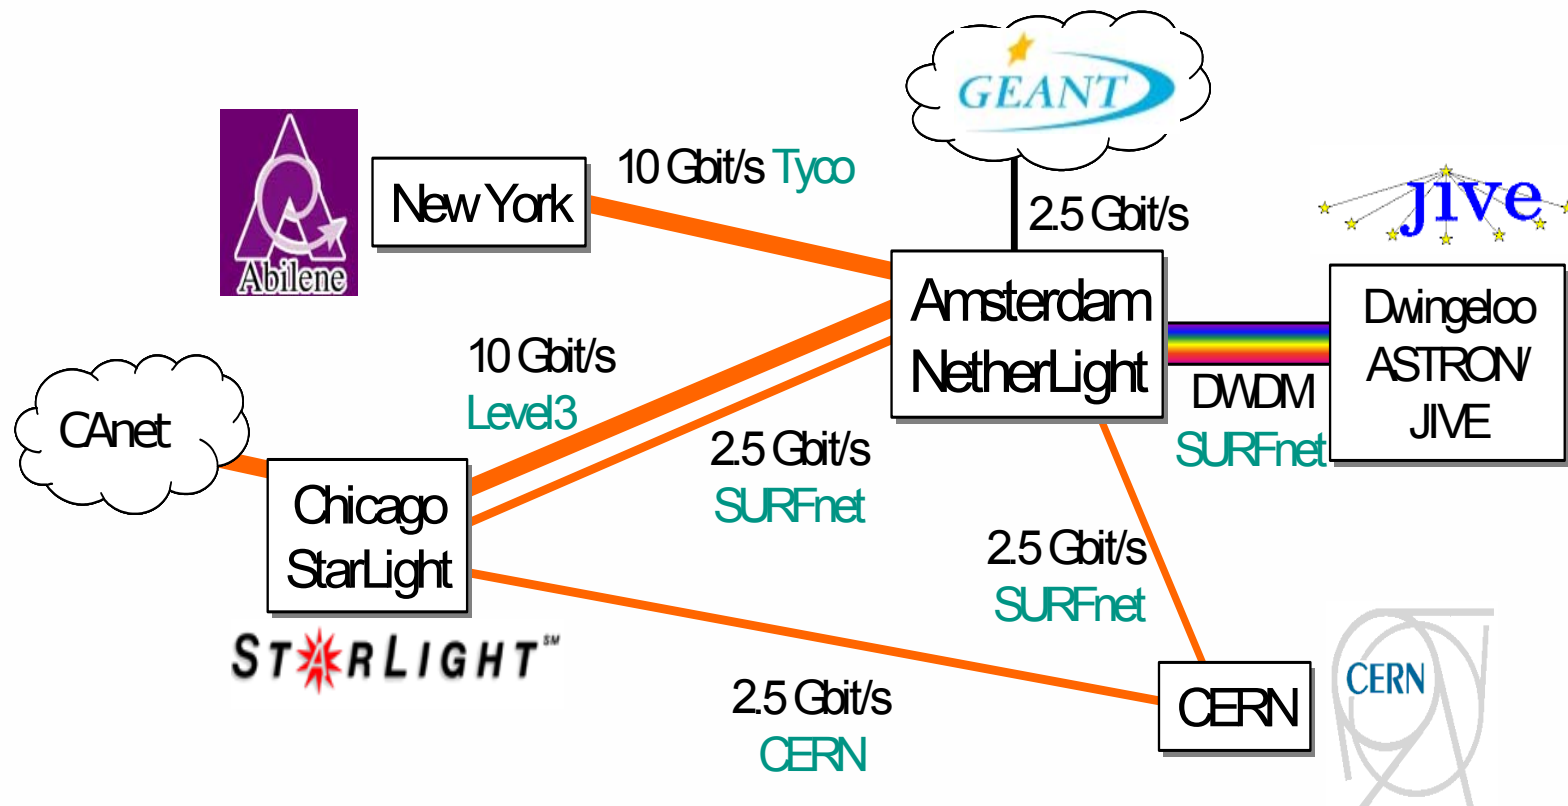

→ GLIF History

- Second Lambda Workshop in 2002 in Amsterdam was attached to iGrid2002, hosted by Science Park Amsterdam

→ NetherLight Network 2002

- The iGrid2002 event brought many lambdas to Amsterdam

→ GLIF

- August 2003: third Lambda Workshop in Reykjavik hosted by NORDUnet and attached to the NORDUnet 2003 Conference
- In Reykjavik with 33 participants from Europe, Asia and North America it was agreed to continue under the name:

GLIF: Global Lambda Integrated Facility

→ GLIF Founding Members

→ GLIF after Reykjavik

- GLIF is a collaborative initiative among worldwide NRENs, consortia and institutions with lambdas, as such GLIF is clearly positioned on the demand side of the market
- GLIF is a world-scale Lambda-based Laboratory to facilitate application and middleware development
- GLIF will be managed as a cooperative activity
- WWW.GLIF.IS will be the home for all interested in the GLIF activities

→ GLIF Working Groups

- **Governance and Growth**
 - **Kees Neggers** - kees.neggers@surfnet.nl - **chair**.
Goal: To identify future goals in terms of lambdas, connections and applications support, and to decide what cross-domain policies need to be put in place
- **Research and Applications**
 - **Peter Clarke** - clarke@hep.ucl.ac.uk - **chair**
Goal: To identify applications that can benefit from LambdaGrids, and to define the services that the user communities need
- **Technical Issues**
 - **Erik-Jan Bos** - erik-jan.bos@surfnet.nl - **chair**
Rene Hatem - rene.hatem@canarie.ca - **co-chair**.
Goal: To design and implement an international LambdaGrid infrastructure, identifying equipment, connection requirements, and engineering functions and services
- **Control Plane and Grid Integration Middleware**
 - **Gigi Karmous-Edwards** - gigi@mcnc.org - **chair**
Goal: To agree on the interfaces and protocols that talk to each other on the control planes of the contributed Lambda resources

→ GLIF 4th Annual Workshop

- The GLIF 4th Annual Global LambdaGrid Workshop was held in Nottingham, United Kingdom on September 2 and 3, 2004 attached to the UK All Hands eScience Meeting

Organized by Cees de Laat of University of Amsterdam and Maxine Brown of University of Illinois at Chicago.

→ GLIF Nottingham Participants

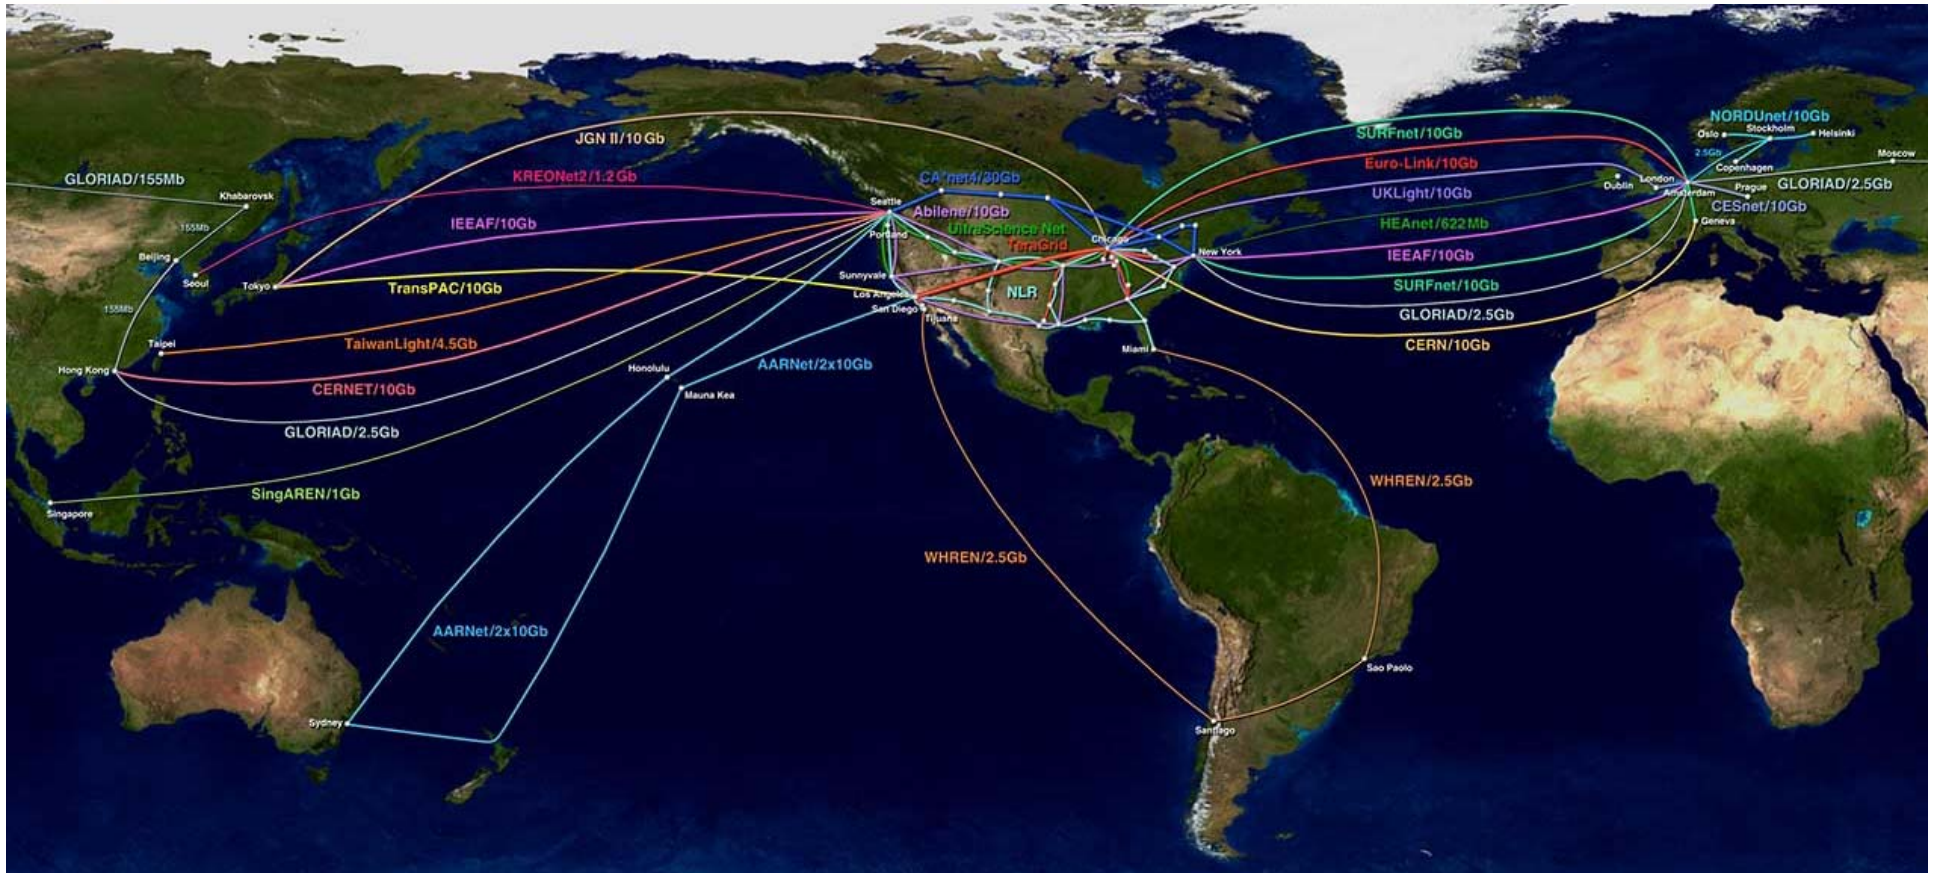

→ GLIF after Nottingham

- GLIF is an open community
- GLIF has participants, not members
- GLIF “glues” together the networks and resources of its participants
- TERENA to serve as the GLIF Secretariat

Appropriate to their mission and the spirit of community cooperation, GLIF participants implemented a “lightweight” governance structure.

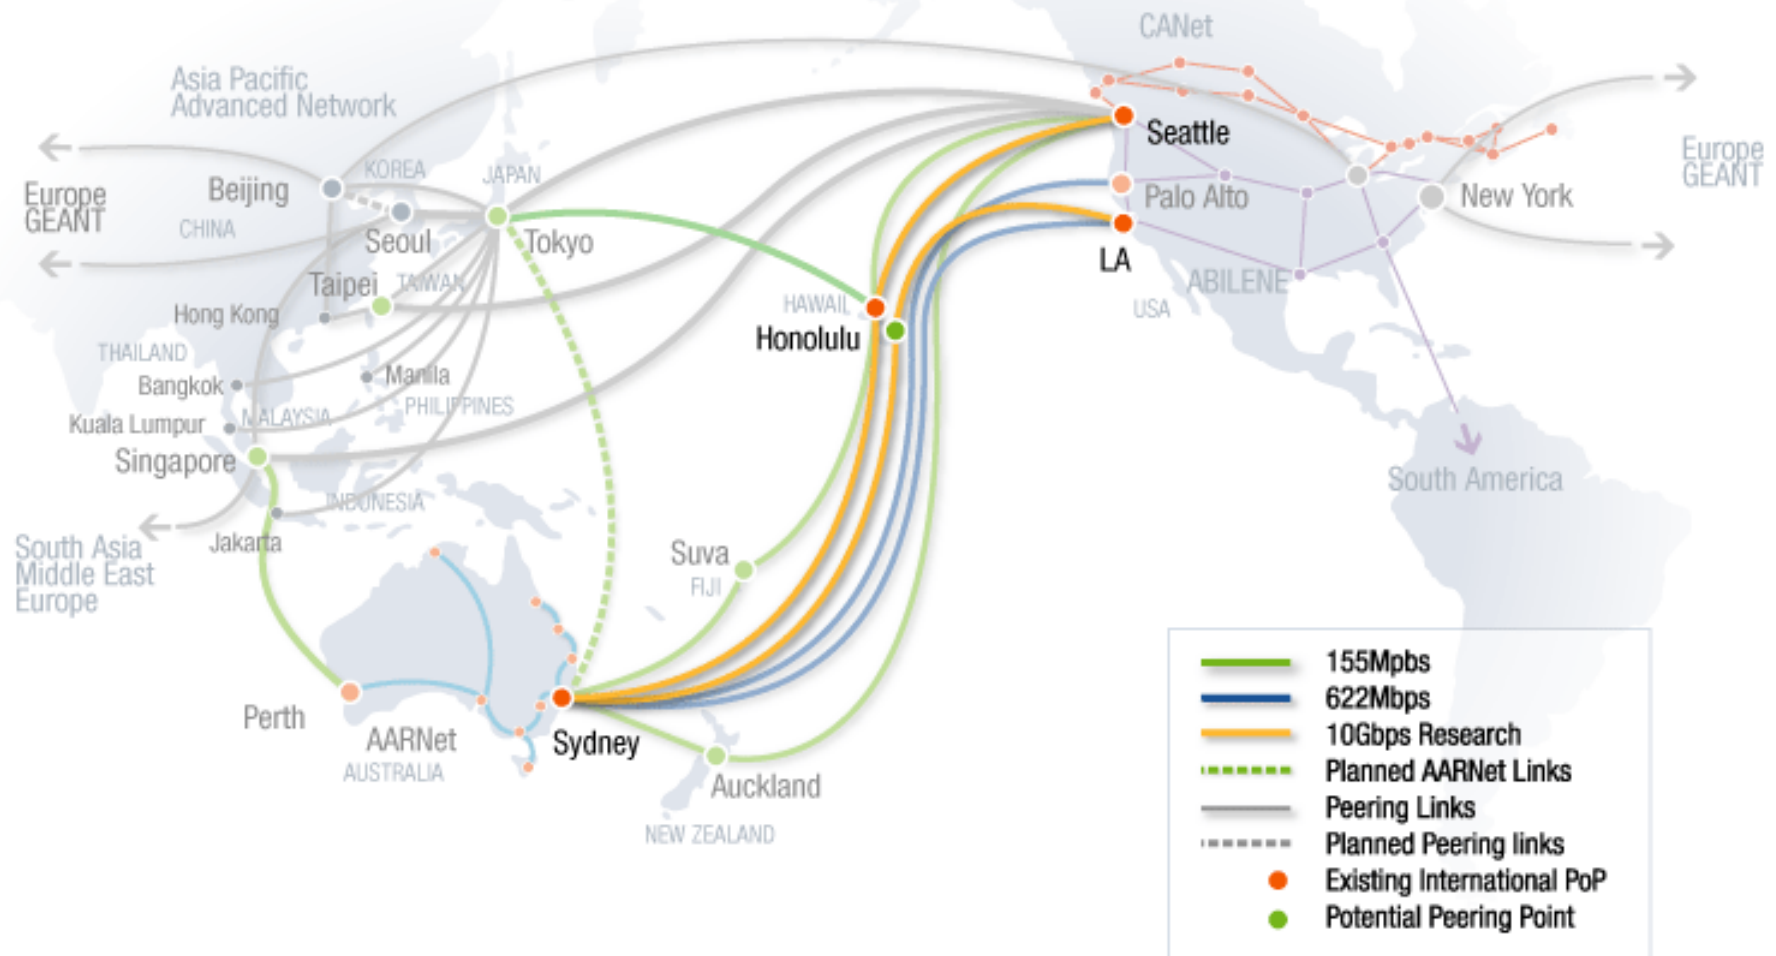

GLIF World Map – December 2004

Visualization courtesy of Bob Patterson, NCSA.

→ SXTransPORT dual 10Gbps circuits

→ AARNet Australia – fibre coverage

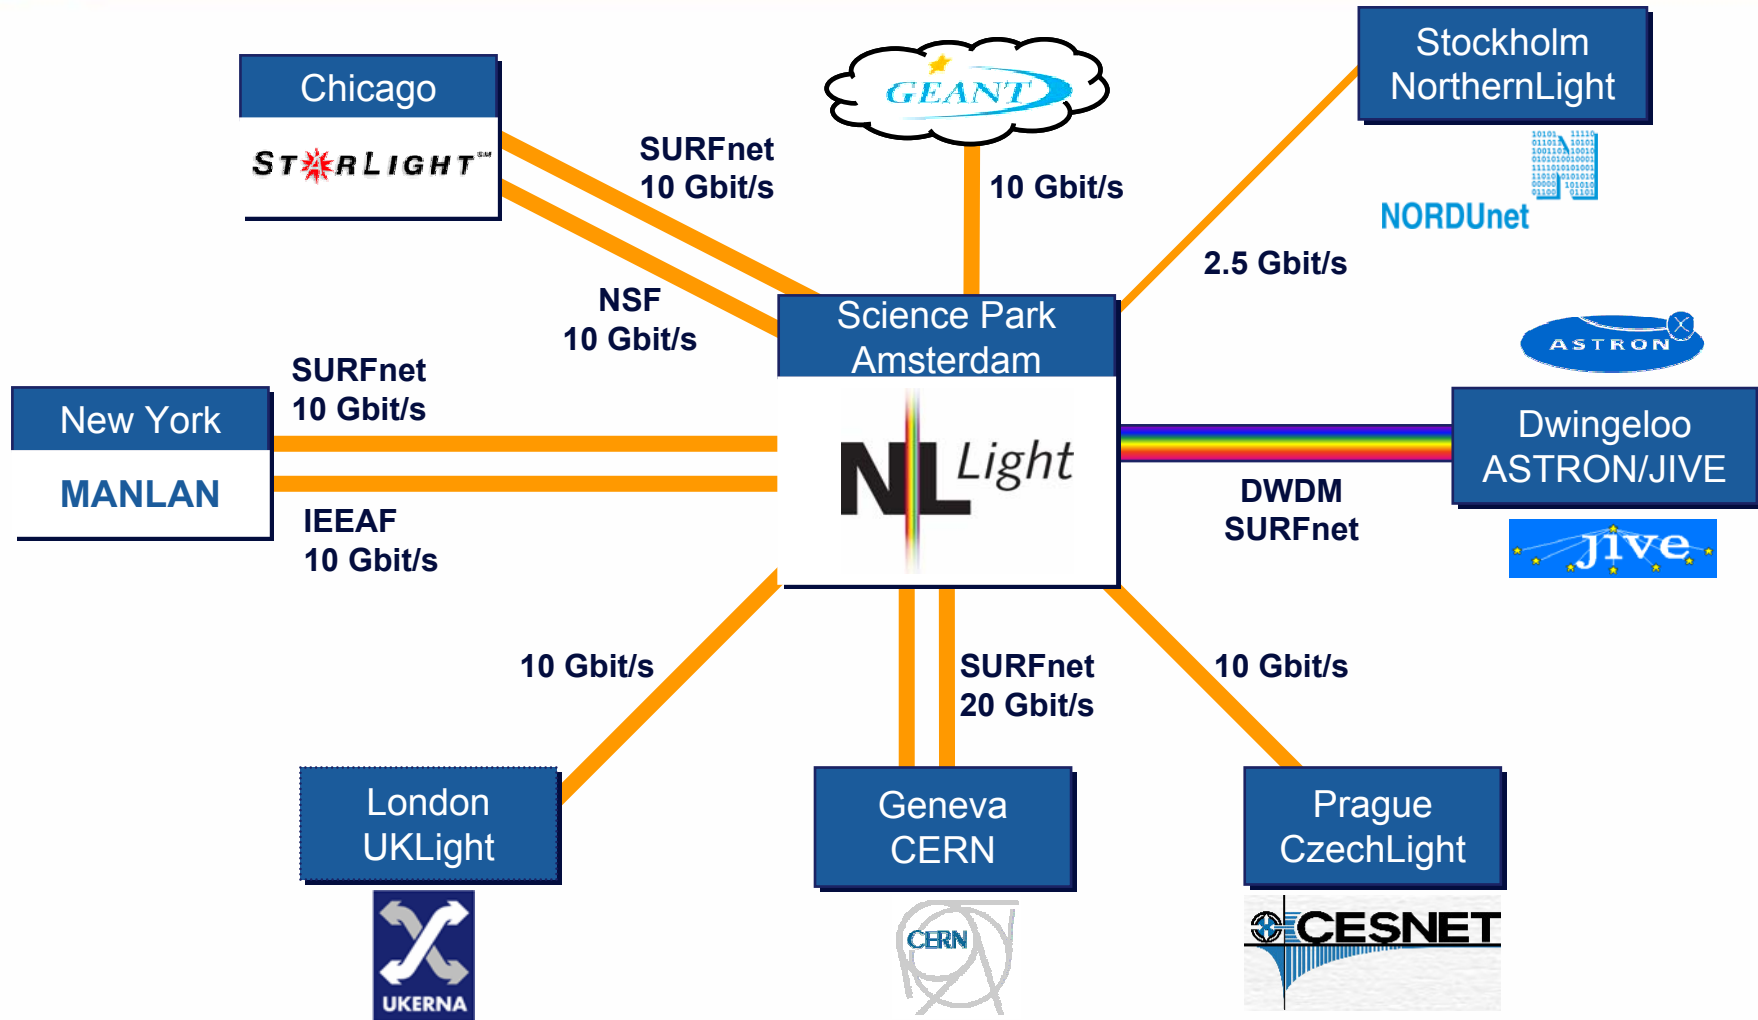

→ Overlay networks

10Gbps Research Network - Radio Telescopes and SuperComputer

→ NetherLight 2005

→ NetherLight: Open Optical Exchange

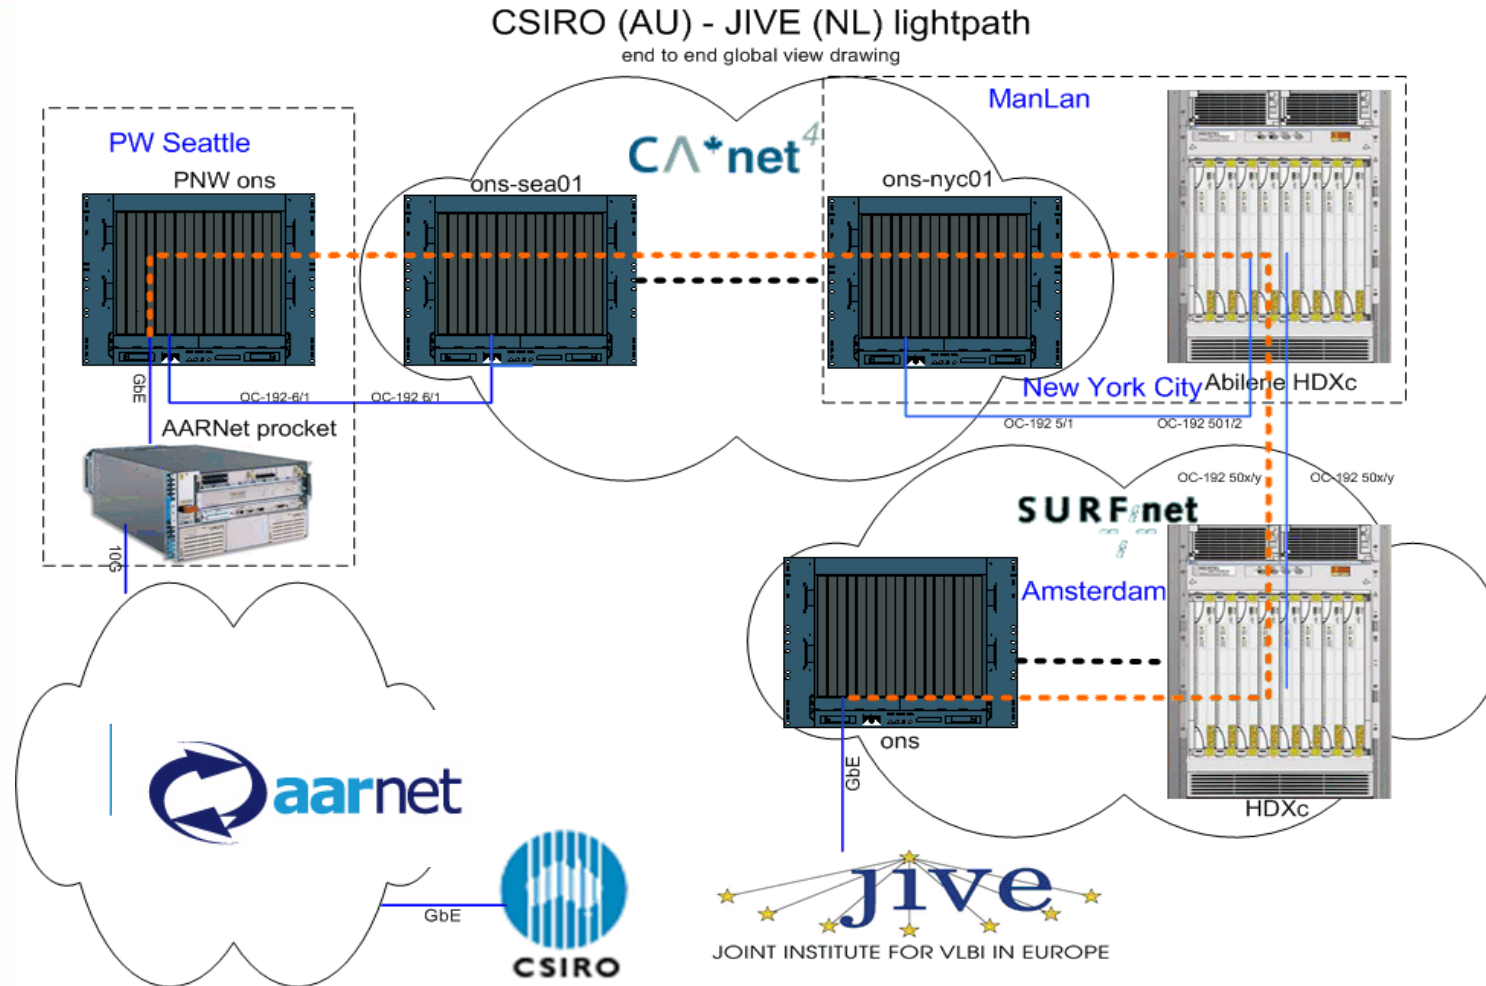

- Open Optical Exchange in Amsterdam
 - Operational since January 2002
 - Established in Science Park Amsterdam
 - Built and operated by SURFnet
- Nortel Networks HDXc at the centre
- Full duplex 640G non-blocking cross-connect capability

→ Australian eVLBI data sent over high speed links to the Netherlands

- The data from two of the Australian telescopes were transferred to the Netherlands over high-speed links and were the first to be received by JIVE
- The data was transferred at an average rate of 400Mbps
- The data from these two telescopes were reformatted and correlated within hours of the end of the landing
- This early correlation allowed early calibration of the data processor at JIVE, ready for the data from other telescopes to be added
- Significant international collaborative effort

→ Australia → Europe wide-band (near-real-time) data transfer

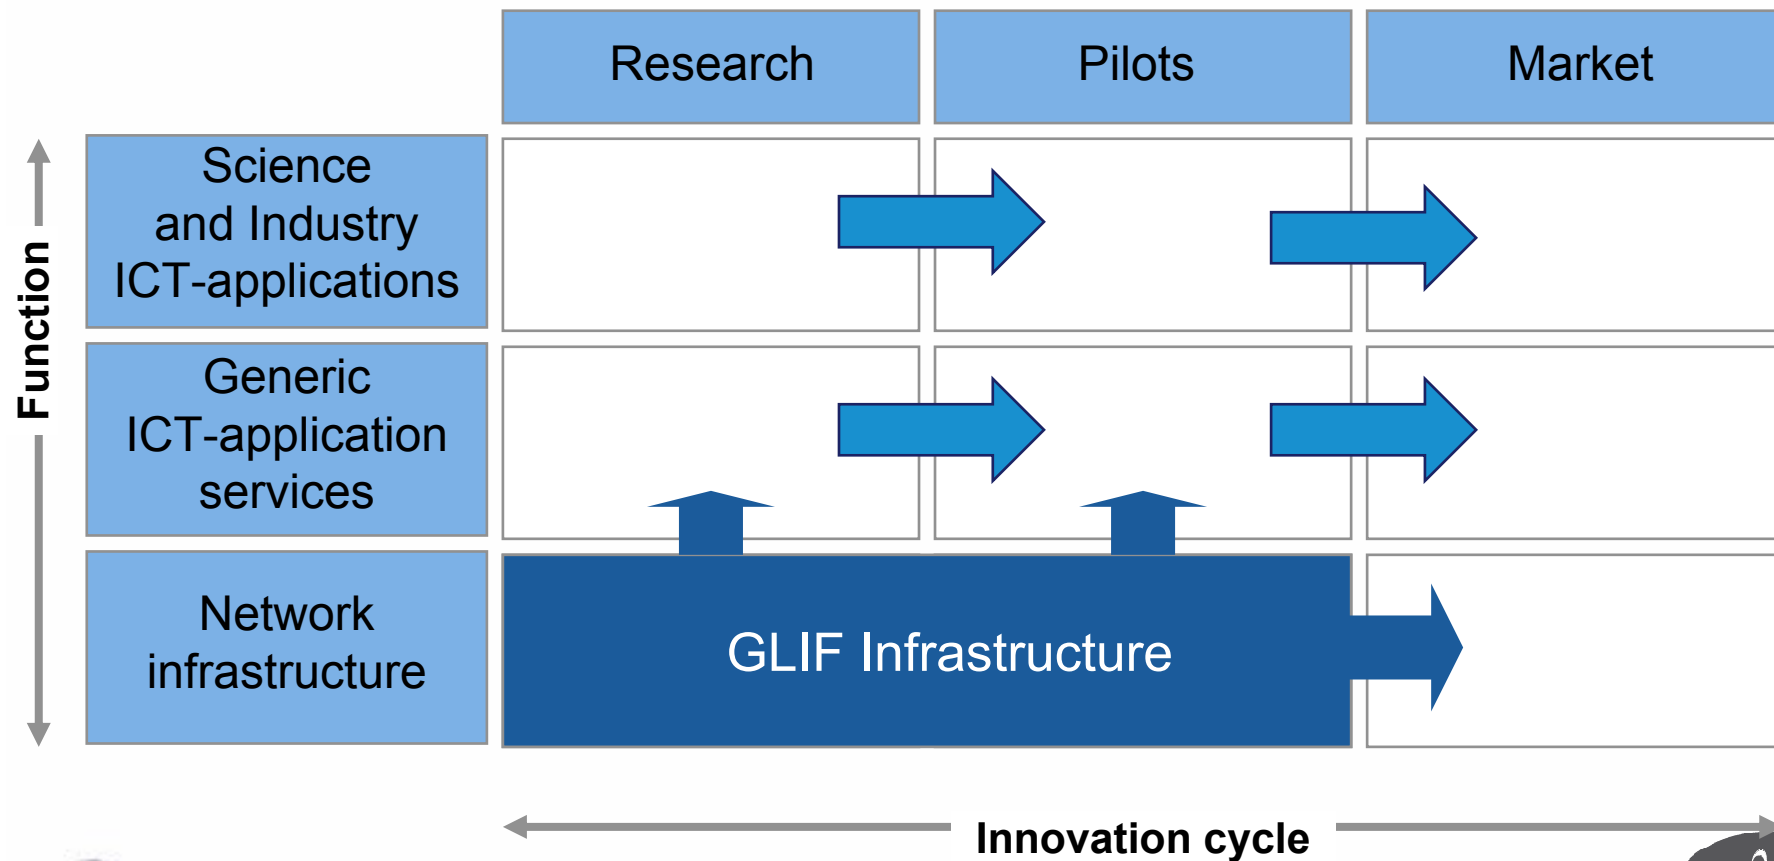

→ GLIF Next Steps

- Best Current practice documents:
 - Interoperability and interconnectivity
 - Definition of open optical exchange
- Register of GLIF Resources

- Next Global LambdaGrid Workshops:
 - 2005 at UCSD, hosted by Cal-(IT)2 in conjunction with iGrid2005
 - 2006 in Japan, hosted by the WIDE Project (Jun Murai) and JGN-II (Tomonori Aoyama)

→ GLIF's major challenge

How to create an effective 'shift register' for innovative ICT-applications, using the new infrastructure ?

→ Connectivity challenge

- Reaching out to the users
- So far most researchers have to come to the emerging GLIF infrastructure
- Challenge is to bring GLIF to the desk top of the researchers and to their scientific instruments
- This means dark fiber to remote instruments and hybrid networking functionality into the LANs at the campuses

→ Middleware challenge

- How do we glue things together?
- Users need ubiquitous end to end lightpaths connectivity over a multi-domain infrastructure
- Harmonize use of existing protocols
- Invent new protocols
- Create user friendly AAA features

Paving the way to a ubiquitous and scalable
Services Grid

→ Application Challenge

- In the end its all about applications
- Stimulate the development of applications that explore the new hybrid functionality
- Work closely with the GLIF users on best practices to overcome the connectivity and middleware challenges
- Explain the opportunities to other researchers

→ GLIF 5th Annual Workshop

The GLIF 5th Annual Global LambdaGrid Workshop will be held in September 2005 in conjunction with iGrid 2005 meeting in the new UCSD Cal-(IT)² building in San Diego, California, USA,

*i*Grid 2005

THE GLOBAL LAMBDA INTEGRATED FACILITY

September 26-30, 2005
University of California, San Diego
California Institute for Telecommunications and Information Technology [Cal-(IT)²]
United States
