## QCD Higher Order Corrections in $H \rightarrow \tau \tau+1$ jet at the LHC

B.Mellado, S.Padhi, W.Quayle and Sau Lan Wu (University of Wisconsin)

Special thanks to J.Campbell, F.Krauss and K.Ellis TEV4LHC, Higgs Session 10/21/05

## Motivation

\$ $\mathrm{H} \rightarrow \tau \tau(I I+\mathrm{lh})+$ jets are fundamental for an early observation and robustness of low mass SM Higgs
> Addressing phenomenological and experimental issues

$\ddagger$ We are considering QCD Higher order effects on analyses with +1 jet and +2 jets
$>$ NLO QCD corrections for VBF signal and Z+jets in $\mathrm{H}+2 \mathrm{jet}$ analysis have been considered in the past

* We are assessing (not reported here) the impact of Z+34jet tree level Matrix Elements on Z+jets after applying H+2jet analysis cuts. Use ALPGEN/SHERPA
$\square$ Address central jet veto with ALPGEN/SHERPA
$>$ QCD Higher order corrections have not been evaluated within the $H \rightarrow \tau \tau+1$ jet analysis neither for signal nor for the $\mathrm{Z}+$ jets background
* NLO corrections are evaluated here with MCFM
* We also address the impact of $\mathrm{Z}+2-3$ jet tree level ME on Z+jets using ALPGEN/SHERPA (not reported here)

## $\mathrm{H} \rightarrow \tau \tau$ Associated with one hard jet

## Low Mass SM H $\rightarrow \tau \tau+j e t s$

\& Reconstruct Higgs mass with collinear approxim

$$
H(\rightarrow \tau \tau \rightarrow l l)+\geq 2 j e t s(V B F)
$$

$$
H(\rightarrow \tau \tau \rightarrow 2 \mathrm{l})+\geq 1 \text { jet }
$$

Bruce Mellado, Higgs WG Meeting 10/21/05

## SM Higgs $\rightarrow \tau \tau+1$ jet

1. Large invariant mass of leading jet and Higgs candidate
2. Large $P_{T}$ of Higgs candidate
3. Leading jet is more forward than in QCD background
B.Mellado, W.Quayle and Sau Lan Wu Phys.Lett.B611:60-65,2005

Higgs Decay Products

Tag jet

Bruce Mellado, Higgs WG Meeting 10/21/05
$\$$ QCD Z+1j production gives about 50\% of background $>$ Need to evaluate role of QCD higher order corrections * These are not trivial due to specifics of cuts

## QCD HO Corrections in QCD Z+1jet

MCFM

Bruce Mellado, Higgs WG Meeting 10/21/05

## K Factor

\$Strong effect on $P_{T}$ of leading jet and the invariant mass of $Z$ and the leading jet

## Sherpa

Bruce Mellado, Higgs WG Meeting 10/21/05
\$Central jet veto ("top killer", $P_{T J}<30 \mathrm{GeV}$ ) significantly reduces effect of higher order corrections
$>$ With $\mathrm{M}_{\mathrm{ZJ}}>700 \mathrm{GeV} \mathrm{Z}+1 \mathrm{j}$ increases by factor of 2

Bruce Mellado, Higgs WG Meeting 10/21/05

## QCD NLO Corrections to $\mathrm{H}+1 \mathrm{j}$

$\neq K$-factors are strong for large $P_{T H}$ and $M_{H J}$
MCFM

Bruce Mellado, Higgs WG Meeting 10/21/05

## QCD NLO Corrections to $\mathrm{H}+1 \mathrm{j}$

## \$K-factors remain strong after jet veto

Bruce Mellado, Higgs WG Meeting 10/21/05

## QCD NLO Corrections to $\mathrm{H}+1 \mathrm{j}$

## \& Leading jet's $P_{T}$ before and after veto

Bruce Mellado, Higgs WG Meeting 10/21/05

## QCD NLO Corrections to $\mathrm{H}+1 \mathrm{j}$

## * Higgs pseudorapidity before and after veto

Bruce Mellado, Higgs WG Meeting 10/21/05

## QCD NLO Corrections to VBF H

Bruce Mellado, Higgs WG Meeting 10/21/05

## Outlook and Conclusions

+Low mass Higgs searches with $\mathrm{H} \rightarrow \tau \tau$ in association with high $P_{T}$ jets are crucial at the LHC
$\$$ We are investigating QCD Higher order corrections to signal and background for $\tau \tau+1$ jet
$\$$ QCD HO corrections are large in the region of the phase space where the signal-to-background is optimal for searches
$>$ QCD $Z+1 j$ is enhanced by a factor of 2
$>$ Signal, $\mathrm{H}+1 \mathrm{j}$ is enhanced by a factor 1.75
$>$ Need to re-optimize the analysis
$>$ Signal significance does not decrease
