RemoteBar has now own “East Interface”

Currently exactly the same interface/WSDL as BAR

- Nevertheless, HLM requests can not be simply forwarded, since request classes for RemoteBar are in another package

RemoteBar will be deployed automatically in same A webapp as Bar

- BarRemote (wsdl)
  - gdftRequestService
  - vllRequestService
  - cancelService
  - queryService
- Bar (wsdl)
  - gdftRequestService
  - vllRequestService
  - cancelService
  - queryService

Changes to Remote Bar Interface?

- L-NSAP interface will influence Remote Bar interface
