

# Update on SAM/SFT

- **General points raised last week**
  - Analysis from Holger showed a number of points
  - Main problem - apparent discrepancy between spreadsheet overall availability and individual numbers shown by GridView
    - Under investigation
  - Request (Jeff + Holger) for extended tables of individual test results
    - Already in work plan for SAM
  
- **BNL issues**
  - Bruce provided details of problems at BNL
    - Many have been resolved already by SAM team (Piotr)
  - Summary:
    - The current status of BNL-LCG site is, that after switching from dTeam to OPS VO they fail CE tests with job-listmatch error (as if the CE does not support OPS VO). On the other hand they are successfully passing SE/SRM tests.
    - Second comment is that the current state of BNL in SAM is not related that much to the problems they reported, which have been fixed.

# SAM & test status

- **First priority - being worked on**
  - Debugging & improving display/presentation
  - Implementation by VO (inc VO tests)
  - Existing site service tests:
    - More reliable - e.g. should not run if dependency fails
    - More verbose - details of what happened
    - Missing tests - can some service testing be more complete?
  
- **Second priority -**
  - Missing sensors:
    - gLite WMS - work by EUMedGrid & PPS
    - VOMS - INFN, but this has been very slow (progress?)
    - R-GMA registry - something basic from RAL exists but not integrated
    - myProxy - missing
  
- **There is much scope for collaboration:**
  - You would like more, better, or more complete tests
  - You believe tests are not appropriate
