

Enabling Grids for E-sciencE

Practical: The Information Systems

www.eu-egee.org

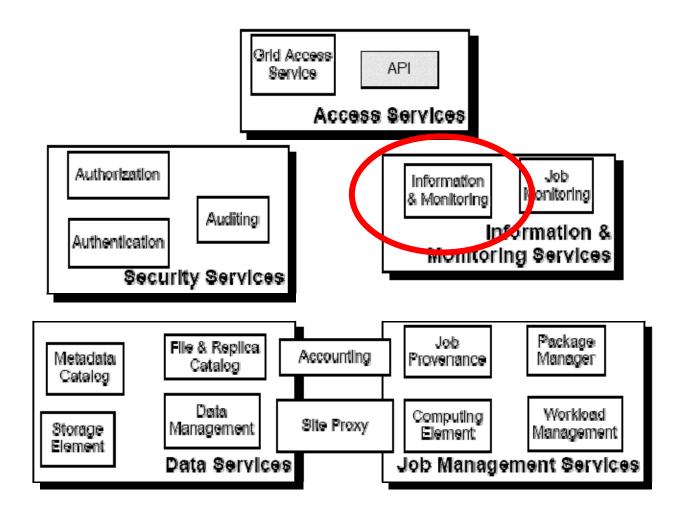

Overview of gLite Middleware

Enabling Grids for E-sciencE

Uses of the Information System

Enabling Grids for E-sciencE

If you are a user

Retrieve information about

- Grid resources and status
- Resources that can run your job
- Status of your jobs

If you are a middleware developer

Workload Management System:

Matching job requirements and Grid resources

Monitoring Services:

Retrieving information about Grid Resources status and availability

If you are site manager or service

You "generate" the information for example relative to your site or to a given service

 The data published in the Information System (IS) conforms to the GLUE (Grid Laboratory for a Uniform Environment) Schema. The GLUE Schema aims to define a common conceptual data model to be used for Grid resources.

http://infnforge.cnaf.infn.it/glueinfomodel/

 The BDII (Berkeley DB Information Index), based on an updated version of the Monitoring and Discovery Service (MDS), from Globus, is adopted as main provider of the Information Service.

Overview Of Practicals

- BDII Information System
 - main Information System for the current production grid
 - Two sets of commands:
 - lcg-infosites: simple, meets most needs
 - lcg-info: supports more complex queries

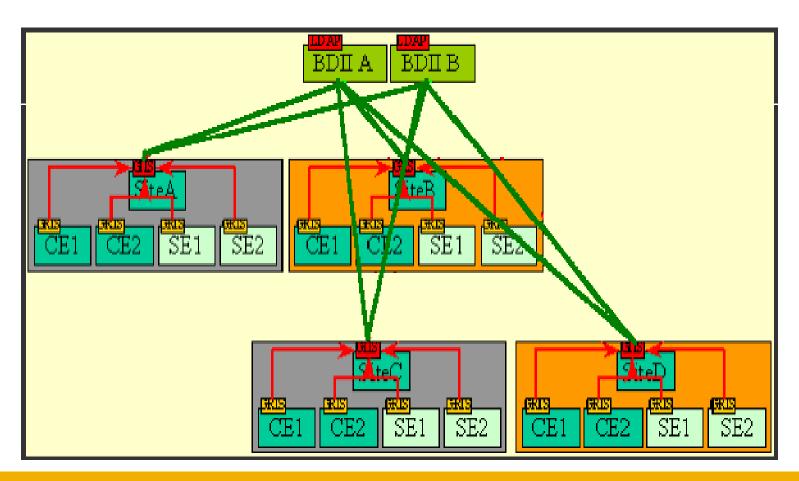

lcg-infosites

EGEE-II INFSO-RI-031688 6

LCG Information Service

- a user or a service can query
 - the BDII (usual mode)
 - LDAP servers on each site

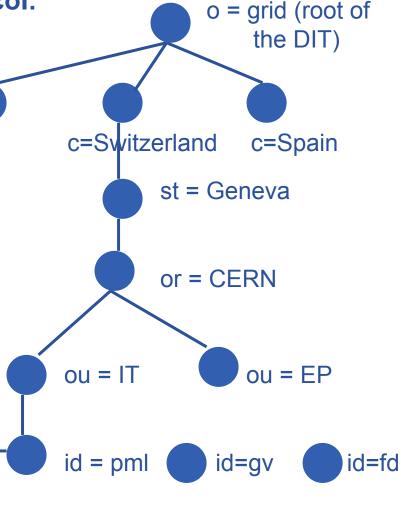

The LDAP Protocol

► Lightweight Directory Access Protocol: structures data as a tree

Following a path from the node back & US the root of the DIT, a unique name is built (the DN):

"id=pml,ou=IT,or=CERN,st=Geneva, \
c=Switzerland,o=grid"

objectClass:person cn: Patricia M. L. phone: 5555666 office: 28-r019

lcg-infosites

 The lcg-infosites command can be used as an easy way to retrieve information on Grid resources for most use cases.

USAGE: lcg-infosites --vo <vo name> options -v <verbose level> --is <BDII to query>

lcg-infosites options

ce	The information related to number of CPUs, running jobs, waiting jobs and names of the CEs are provided these data group all VOs together. With "-v 1" only the names of the queues will be printed while with "-v 2 RAM Memory together with the operating system and its version and the processor included in each CE a printed.			
se	The names of the SEs supported by the user's VO together with the kind of Storage System, the used and available space will be printed. With "-v 1" only the names of the SEs will be printed.			
closeSE	The names of the CEs where the user's VO is allowed to run together with their corresponding closest SEs are provided.			
Ifc	Name of the Ifc Catalog for the user's VO.			
tag	The names of the tags relative to the software installed in site is printed together with the corresponding CE.			
all	It groups together the information provided by ce, se, Irc and rmc.			
is	If not specified the BDII defined in default by the variable LCG GFAL INFOSYS will be queries. However the user may want to query any other BDII without redefining this environment variable. This is possible specifying this argument followed by the name of the BDII which the user wants to query. All options admits this argument.			

10

PRACTICAL

- This introduces use of the commands to access the information system
- You will be exploring the GILDA grid, seeing what computing elements and storage elements exist.
- Please go to the link from this practical.

lcg-info options

Enabling Grids for E-sciencE

list-attrs	Prints a list of the attributes that can be queried.		
list-ce	Lists the CEs which satisfy a query, or all the CEs if no query is given.		
list-se	Lists the SEs which satisfy a query, or all the SEs if no query is given.		
query	Restricts the output to the CEs (SEs) which satisfy the given query.		
bdii	Allows to specify a BDII in the form: If not given, the value of the environmental variable LCG_GFAL_INFOSYS is used. If that is not defined, the command returns an error.		
sed	Print the output in a "sed-friendly" format.		
attrs	Specifies the attributes whose values should be printed.		
VO	Restricts the output to CEs or SEs where the given VO is authorized. Mandatory when VO-dependent attributes are queried upon.
